

# The Artificial Intelligence (AI) of Self-Driving Cars

Trevor Knierim, Joseph Norton, Nathan Sikon, Cleveland State University

## INTRODUCTION

With the creation of AI, the talk of assisted and automated driving has skyrocketed with companies such as Tesla leading the industry with state-of-the-art AI assistance that allows you to sit back as the car takes over and helps you arrive towards your destination.

## OBJECTIVES

‡ The objective of this project was to explore the development of AI in self-driving cars.

## METHODS

‡ This paper will explore the development of AI in self-driving cars, the AlphaStar game, that meant that the AI did better.

## RESULTS

- ‡ Over the past 20 years, AI has severely increased its ability in different types of recognition as well as comprehension in reading and understanding language.
- ‡ From 1998 to about 2015, AI was behind the Turing test benchmark but around 2015 is when AI passed that line.
- ‡ Even though Reading Comprehension was the last category to be tested, so far it is the one that AI has performed best on.

## Acknowledgments

Special thanks to our advisor Dr. Amir Abol-El-Enay for his support in this project.
